# THE "HENDERSON" LAWN GRASS SEED

It Produces a Carpet of Unrivalled Emerald Green and In Four Weeks from Sowing It Is Ready For Mowing

A good lawn is unquestionably the most beautiful and most essential feature of the home grounds; or of any landscape development. Nothing else can set off the architectural beauty of a building to better advantage than a well-made, well-kept lawn. A beautiful lawn is not only valuable from an aestbetic viewpoint, or because it promotes pride of ownership; but, it also has intrinsic value, actually increasing the value of the property upon which it grows.

A lawn made with THE "HENDERSON" LAWN GRASS SEED is practically permanent. Customers tell us that lawns made with

are as beautiful today as when they were first made.

It should be borne in mind when considering the making of a lawn that the cost of the seed represents only a small part of the actual investment. The labor cost is usually far in excess of the cost of the seed. It is therefore

this mixture twenty or more years ago

false economy to save a few cents by buying a mixture of grass seeds obtained from a questionable source, only to be obliged to endure the annoyance and expense of continually repatching a weedy, irregular turf and perhaps being forced to do the entire work over again in a short time.

Henderson's celebrated Lawn Grass Seed Mixture has been

Henderson's celebrated Lawn Grass Seed Mixture has been thoroughly tested by a country-wide use during three-quarters of a century. It is the fruit of years of our personal experience and study, coupled with that of many of America's foremost

gardeners, who steadfastly maintain and unite with us in saying that it has no superior for American conditions and the American climate. The rapidity with which it will form a deep green velvety turf, has been the delight of gardeners since its introduction, for, under ordinary conditions, the bare soil will be clothed with an emerald carpet of living green in four weeks' time.

No longer must unsightly areas under trees, in court yards, etc., be tolerated. Cover them with a carpet of velvety green. Use Henderson's Shady Nook Mixture.

# HENDERSON'S SHADY NOOK

### The Ideal Grass Seed Mixture for Shaded Areas

On nearly all lawns there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into Grass, but with this mixture there need be no further difficulty. It is a combination of fine, dwarf growing, evergreen varieties, which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is

Price, ½ lb., 40c; lb., 75c; 3 lbs., \$2.10; 5 lbs., \$3.50; 10 lbs., \$6.50; 25 lbs., \$15.00; 100 lbs., \$55.00; transportation paid.

### SPECIAL "BENT FORMULA"

It Makes Every Lawn Like a Putting Green

A combination of the finest recleaned Grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so

largely used in the finer Putting Greens of today.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is the most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn.

We advise seeding at the rate of one pound to cover a space of 10 x 20

or 200 square feet.

Price, ½ lb., 60c; lb., \$1.10; 5 lbs., \$5.00; 10 lbs., \$9.50; 25 lbs., \$22.50; 100 lbs., \$80.00; transportation paid.

frequently "sour," and if the drainage is defective it is apt to be covered with moss and coarse Grasses. In such cases an application of slaked lime, at the rate of one hundred pounds to each thousand square feet, or two tons to the acre, is an excellent corrective and sweetener, but the moss should be first raked off. rate of 1 lb. for 200 sq. ft., 5 lbs. for 1,000 sq. ft.

### TOUGH TURF

### For Tennis Courts, Croquet Grounds, Bowling Greens, etc.

The turf required for outdoor sports must be closely interwoven. firm, elastic, smooth, and durable to stand the wear and tear. These requirements are met in this mixture, which is composed of fibrous, deep-rooting Grasses that spread and intermingle. The seeds are blended in the proper proportions to form and maintain a tough matted sward, constantly green, even in dry weather. These varieties of Grasses, being low-growing and fine-leaved, require to be sown liberally if a playing turf is desired quickly; not less than one pound should be used for 200 square feet, or 100 to 150 lbs. per acre, although 50 per cent more may be used with advantage. Half that quantity will do for renovating. This mixture has been used with great success at the Rumson Polo Fields, also at the Forest Hills Tennis Courts. the great sport centers for Tennis. and numerous other playing fields.

Price,  $\frac{1}{2}$  lb., 30c; lb., 50c; 3 lbs., \$1.45; 5 lbs., \$2.35; 10 lbs., \$4.50; 25 lbs., \$11.00; 100 lbs., \$42.50; transportation

### SEASIDE

Our "Seaside" mixture will make a good turf of green on sand where the finer Grasses will not thrive, though, of course, the sand must be top-dressed with not less than 2 inches of soil before even our "Seaside" Grass Seed is sown, to enable the young Grass to get a start, after which the long roots—peculiar to the varieties we used in this mixture—drive down deeply in the sand and remain permanently self-sustaining, if attention is given to sprinkling during dry weather. Sow seed at the rate of 1 lb. for 200 sq. ft.; 5 lbs. for 1,000 sq. ft.

Although a member of the Acanthus family the flowers remind one of Petunia, having long tubed blossoms of silky blue-lavender. Seed should be sown when soil is cool, late Autumn or early Spring. Usually gives some flowers the first summer.

Price, pkt., 25c.

### SWEET PEA, TREASURE ISLAND

4386 A sparkling golden orange—success at last in the quest for an orange Sweet Pea of outstanding distinction. Unlike other orange Sweet Peas, Treasure Island is very large flowered and semi-duplexed. The average single flower measures 2½ inches across and is 2 inches deep. It is also a very strong grower, throwing a majority of fours on 15 and 16 inch stems. A broad semi-duplexed standard forms a perfect background for two wide spread wings, which in turn shield a very full keel that turns white at its base.

Price, pkt., 25c.

### VERBENA BIPINNATIFIDA (Perennial)

4485 A A perennial Verbena that flowers as quickly the first season and is fully as beautiful as any of the annual types. The flowers of a most attractive blue-reflecting lavender (no slightest hint of magenta) are carried in big flattened clusters. Seed sown in April will give nearly five months of bloom the first season. The foliage is fern-like and feathery and the plants make eighteen inch mounds two feet across.

Price, pkt., 25c.

### VOLUTARIA, STAR OF THE DESERT (Annual)

4539 A flower species from the African Desert. When cut this graceful long stemmed flower will keep its lovely deep-lavender color for a week. It will be treasured as an addition to the existing class of cut-flowers. Sow in open ground early in the spring and thin to a foot apart. Price, pkt., 25c.

### ZINNIA, WILL ROGERS (Annual)

4695 Admirers of the late great humorist, Will Rogers, have dedicated this flower to pay tribute to his memory. What more fitting and appropriate tribute could be paid him than to christen one of our loveliest flowers tribute could be paid him than to christen one of our loveliest flowers with his name and let it carry on his great work of bringing joy and happiness to millions. The new Zinnia Will Rogers is an outstanding and strikingly beautiful variety worthy of his name. The color is one of those vibrant and enlivening shades which calls vividly to mind the warmth of affection and esteem in which he is still held by all Americans—glowing intense scarlet, boldly splashed over a bloom of immense size. It is a flower which attracts and arrests attention anywhere: tall, free blooming and robust, the plants bloom profusely throughout the summer. Price. pkt., 25c. Price, pkt., 25c.

### IPOMOEA, SCARLETT O'HARA (Annual) **GOLD MEDAL**

2499 The only Gold Medal winner in two years, this Morning Glory is entirely distinct from any other on the market. It is quite early to bloom, a carnelian-red, sometimes called carmine, self early to bloom, a carnenan-red, sometimes cancer carnenar, sen-color, is of medium size, about three and a half inches across, blooms until frost and stays open longer than others. Blooms are found open even in afternoons. Foliage is quite distinct, each leaf with one large and two small side lobes. To insure good germination, either chip or soak the seed a few hours before planting. Price, pkt., 25c.

### LINARIA MAROCCANA "FAIRY ROSE" (Annual)

2629 The Linaria has made such strides in popular favor of late years that we feel we did well to add last season another distinct variety to the series commenced by the introduction of "Fairy Bouquet." The latest comer presents a pleasing tone of rosy pink, just tinted with a delicate lilac. It is of the same height (7 to 8 inches) as its sister sorts, it is quite as floriferous and will doubtless prove of excellent service for summer bedding. Price, pkt., 25c.

### NOLANA LANCEOLATA "BLUE ENSIGN" (Annual)

3063 This is a form of the Chilean Bellflower which was brought over from South America several years ago. It can be effectively grown either under glass or in the open ground. In pots it will grow 12 to 15 inches high, or when put outdoors it spreads a little and throws up its lovely large ultramarine—blue flowers on stems 5 or 6 inches high. In shape these strongly resemble an Ipomoea and their beauty is more enhanced by the large pure white centre, which has a charming effect. Seed should be sown in spring and the plants put outdoors about the end of April, or it may be sown outdoors in May where the plants are to bloom. Not the least of the attractions of this beautiful flower is its very pleasing fragrance. Price, pkt., 35c.

### PETUNIA, HYBRIDA, HOLLYWOOD STAR (Annual) SILVER MEDAL

3337 A Distinctive novelty with five-pointed, star shaped flowers of rose-pink with creamy-yellow throats. Leaves are narrow and elongated, plants bushy, erect, growing taller toward the end of season. Early blooming and prolific all season until killing frost. Price, pkt., 25c.

These are shown on page 14

### HEAVENLY BLUE MORNING GLORY (Annual) (Ipomoea Clark's Earliest)

2498 This is the earliest flowering variety, making a sparse growth of foliage, heavily covered with sky-blue flowers with a golden throat. Seed should be sown in the late spring in a dry sandy location or can be started early indoors and transplanted. For covering a fence or trellis it is ideal... Per 100 seeds, 50c; Pkt.15c

### RUSSELL'S LUPINS (Perennial)

### Awarded a Gold Medal by the Royal Horticultural Society

2672 The outstanding merits of these Lupins, are their wonderful range of colors. The original type of Lupinus Polyhyllus and its older hybrids, produced flowers rather subdued in color. In this strain the colors are rich and varied, ranging through all the shades and tones of red, orange and deep yellow, as well as many intermediate tints and shades. The shapely spikes are borne clear above the foliage and are often from 3 to 3½ feet in length. (Reselected seeds in originator's sealed packets.) Mixed colors.

Price, pkt. of 12 seeds, 25c; large pkts. of 50 seeds 65c; 120 seeds, \$1.25; 250 seeds, \$2.50.

### MARIGOLD GIGANTEA SUNSET GIANTS (Annual)

2720 They are loosely formed, very full centred with broad, heavy petals gracefully overlapping to make a flower of great depth five inches or more across. Sunset Giants is a mixture ranging through golden orange, deep golden yellow, light yellow, lemon yellow, and a delightful new shade of primrose. Height, 3¾ to 4 feet. Price, pkt., 15c.

### NIEREMBERGIA (Annual)

3054 Hippomanica. We can cordially recommend this beautiful little plant. Not more than 4 to 6 inches high, it forms a cushion of elegant light green foliage from which emerge single saucer shaped flowers of a delicate lavender hue, 1 to 1½ inches across, adorned with a clear yellow eye. Of highly ornamental effect, we are sure that it will prove a gem as a pot plant and also suitable for borders and edgings. The bloom is very profuse and of a long-lasting character. Price, pkt., 35c.

### ZINNIA FANTASY STAR DUST (Annual)

4686 The first named variety in the popular Fantasy Zinnia type, STAR DUST has the same shaggy petaled medium sized flower as the mixture, a delicate graceful blossom. The color is a rich, deep golden yellow. Winner of an Award of Merit in the ALL AMERICAN SELECTIONS competition.

Price, pkt., 25c.

# NEW SENSATION COSMOS

### Shown in Colors on Page 28

The Sensation type of Cosmos is today the favorite for cut flower use. The fact that the flowers are of immense size, 4 to 5 inches or more in diameter, with broad heavy fluted petals which slightly overlap, giving a very full single flower, make it ideal for cut flower use. flowers are carried on very long strong stems and are freely produced on plants which reach a height of 3 to 4 feet and have a fairly heavy growth of foliage. The flowers are produced within 8 to 10 weeks from the time the seed is sown. While the flowers are large enough for any ordinary use, some may prefer to disbud for even larger blooms.

### ANNUAL FLOWER SEEDS

These complete the cycle of their existence, growing from seed to seed in one year. Many sorts require to be sown in some sheltered situation such as a greenhouse, cold frame, or window box about a month before they may be planted outdoors. This is necessary not month before they may be planted outdoors. This is necessary not only on account of their tenderness, but also because they need more time for development, and by sowing thus early, the growing season is proportionately prolonged. Others may be sown where they are to stand, in which case they require careful attention for the first few weeks.

While there is no class of plants that will survive better under rigorous conditions, yet in order to achieve the best results they should be planted where they can obtain ample sunlight, may be easily watered, and, in case of early frost, may be quickly protected.

A continuity of bloom may be secured by occasional sowings of many sorts. In the latitude of New York these sowings may be made as late as June 15th.

Biennial Flower Seeds—These grow from seed the first year, then flower and die the following year. Some are grown as annuals.

### PERENNIAL FLOWER SEEDS

The great charm of Perennials lies in their permanence. Once established they are a constant source of pleasure, and among the most interesting plants in our gardens, presenting a variety of size, form and color so great as to fit them for almost every conceivable purpose in the garden. Some may be made to thrive under most unkind conditions, while others require skilful cultivation.

A very large proportion of the Perennial plants that may be grown from good have great value as cut flowers. Particularly so because of

from seed have great value as cut flowers, particularly so because of their great substance, which enables them to stand up well long after

cutting.

Notwithstanding their individual charm, they are most effective when planted in a mixed border, where by arranging them according to height, color and season of flowering, an attractive display may be had from the earliest days of spring, all through the summer, and even after the first frosts herald the approach of winter.

Perennials are generally raised from seed sown from early spring to about August 1st, in the latitude of New York.

Treated thus, they make strong plants which may be planted in a permanent situation early enough in the fall to enable them to winter safely.

should be filled with light sandy loam. A good loam will consist of one part ordinary garden soil, one part humus, and one part sand. Level and firm the soil in the box and sow the seed ir rows about two inches apart. Then, with a smooth board press the seed into the soil. Next cover the seed by screening some of the loam through a piece of mosquito netting, being careful not to have the covering over four times the thickness of the seed. Depending on conditions, it will take from ten to thirty days for all the seeds to germinate. After the second set of leaves has developed, the seedlings should be transplanted into another shallow box, spacing them two inches apart each way.

During the late spring and summer months, perennial seed may be started in a small seed bed outdoors.

Ask for our leaflet, "A Perennial Garden—From Seed."

Note: That when seeds are sown outdoors they should be covered more deeply than if sown indoors or under glass.

### PREPARATION OF THE SOIL FOR BEST RESULTS WITH FLOWERS

The principal object to keep in mind particularly for the successful cultivation of annual flowers, is that the plants complete their life cycle in the comparatively short period of from three to four months time. This naturally leads to the conclusion that although the soil should be well drained, the mechanical condition should be such as to permit the retention of a certain amount of moisture, in order to dissolve the plant foods in the soil, because plants must subsist entirely upon a liquid They are unable to absorb any food before it has first been dissolved.

In order that the soil will be in proper mechanical condition, it must contain an abundance of humus. This can be supplied either through the medium of rotted stable manure, Peat Moss (see page 137) or Hyper Humus (see page 138). The humus material should be spaded in and thoroughly incorporated with the soil. For Annuals, the soil should be dug to a depth of 8 or 9 inches and for Perennials, to a depth of 12 inches or more. Plant food should be applied at the rate of 10 lbs. to 200 square feet. The Henderson Garden Fertilizer (described on page 138) is a well balanced plant food which contains all of the elements required for the successful growth of plants.

The question is frequently raised regarding the soil preferences of various plants. Most garden soils, especially those that are inclined to be sandy, are either neutral or slighly acid. The great majority of garden flowers, especially the Annuals, prefer this type of soil. Those that in their natural habitat are found in woodlands, as well as few others including Daisies Lupines and Salvia, prefer as well as a few others including Daisies, Lupines and Salvia, prefer an acid soil. Where the soil is found to be over-acid, it can be corrected with an application of Hydrated Lime (see page 139), or where it is necessary to increase the acidity of the soil, this can be accomplished by applying Aluminum Sulphate (see page 139).

### GIANT SPENCER

# ORCHID SWEET PEAS

Sweet Pea evolution is constantly producing additions to the glorified race of "Spencers," which have superseded the older types, and in this collection we include a number of the most recent.

The characteristics of the Spencer Sweet Peas, grown under congenial conditions, are: robust growth, the plants attaining a height of from 6 to 10 feet, requiring for full development to be from six inches to a foot apart. The flowers are giants among Sweet Peas, measuring 2 to 2½ inches across. They are beautifully formed, with huge standards, open and upright, and immense wings gracefully poised. Both standards and wings are daintily waved, the undulations reflecting high lights and casting shadows in the depth, thus showing a varied

harmony of tones which greatly enhances the coloring. Three and often four of these queenly blossoms are borne on long, strong stems, rendering them unsurpassable as cut flowers for vases, bouquets and other decorations. Their long-continued profusion of bloom is phenomenal, but accounted for by the fact that a majority of the flowers of true Spencers fall as they fade—before the seed pod is formed—thus continuing the succession of bloom—for, as all know, when Sweet Peas set pods, the flowering diminishes.

Condensed cultural instructions for garden culture under both northern d southern conditions and for winter flowering under glass are given in Henerson's leaflet, "How to Grow Sweet Peas to Perfection," free to customers.

### SUMMER FLOWERING BULBS HENDERSON'S SELECTED

The bulbs offered on this page include some of our showiest garden flowers. They are of easiest culture; planted in spring in good garden soil, they flower with great certainty during the summer and fall. They are also very useful to fill up vacant spots in a hardy border of perennials, adding to it a dash of color. After the tops have been killed off by the frost, all of the bulbs (with the exception of Cinnamon Vine) should be taken up and stored in the cellar over winter, as they are not hardy.

CALADIUM ESCULENTUM
"Elephant's Ear." Grand tropical-looking plant. A favorite for specimens on the lawn, or for bordering large sub-tropical groups. They produce enormous leaves, frequently 4 feet long by 3 feet wide; height, 4 to 5 feet. Plant after the ground has warmed up, and take up before frost. (See illustration.) Extra Size. Price, 35c each; \$3.50 doz.
Transportation paid.

### CINNAMON VINE

A beautiful, hardy climber for anything on which the vines can twine; it grows from 15 to 30 feet high, and when established the vines attain a much greater length. The leaves are green, thick and glossy, always clean, healthy and free from insects. The white flowers, while insignificant, emit a delightful cinnamon-like perfume. The roots are quite hardy and, although the stems die down in winter, the vines shoot up with great rapidity in the spring, and cover trellises or arbors quite early in the season.

Price, extra large, 2-year-old roots, 20c each; \$2.00 doz.; transportation paid.

### CRINUM Kirkii

Produces flowers of the greatest beauty. Usually two flower stalks of dark purplish color are sent up at the same time, each bearing a large umbel of enormous lily-like flowers of white, with a reddish purple stripe through the center. Extra large bulbs 50c each; \$5.00 doz.; transportation paid.

### MADEIRA VINE

The old favorite, "Climbing Mignonette," so much prized for porches and arbors on account of its rapid growth and freedom from insects. Thick, glossy leaves, and long, hanging stems of feathery, fragrant, white flowers. The tubers we offer

are selected large size. Price, 15c each; \$1.50 doz.; \$12.00 per 100; transportation paid.

### MONTBRETIA

The Montbretia is one of the most floriferous and showy of summer-flowering bulbous plants, producing in great numbers, graceful spikes 8 to 12 inches long, each spike bearing from 18 to 30 exceedingly showy, star-shaped flowers, 1½ to 2 inches across. (See colored plate page 47.)

# "SUMMER GLORY" Collection of Eight Summer Flowering Bulbs

Shown in Colors on page 47

Many gardeners who have enjoyed the gay pageant of Spring Bulbous Flowers, will welcome the group offered here. It is a fascinating ensemble, ranging from the extreme daintiness of the Zephranthes, or Fairy Lily, to the bizarre brilliance of the Tigridia, or Shell Flower, and the pure gold of the Calla Elliotiana. The flowering period of this group ranges from June to September.

Summer Flowering Bulbs thrive in a medium rich soil, where a fair amount of

# HENDERSON'S TESTED SEED

Vegetable Gardening is a profitable and pleasurable occupation. There is no food in all the world that can compare with the fresh vegetables from your own garden

Our Prices Have Been Reduced to the Lowest Point, Consistent with the Production of Quality Seeds

The varieties of vegetable seeds offered on this and the following pages are the highest developments in their respective classes and have by rigid tests, as required for the Henderson Standard of Excellence, proven their worth to occupy space in this catalog. Many of them are varieties that were originated by us during the ninety-two years of our existence, and which today are household words throughout the vast expanse of this great land.

It has always been our aim to describe all of our offerings accurately and truthfully, which in many cases has necessitated a rather long description. This year we have reduced them, so that the outstanding facts concerning a variety may be seen at a glance.

ASPARAGUS

CULTURE—Asparagus may be grown in almost any soil or situation, but special success is attained in thoroughly enriched, deeply dug sandy loam. Beds cared for improve with age, lasting for many years. Asparagus may be grown from seed, but as it should not be cut before it is three or four years old, time is saved by buying and planting roots. For complete cultural instructions, send for pamphlet "Asparagus Culture."

### 207 GIANT WASHINGTON (Seed)

Developed under the auspices of the United States Dept. of Agriculture, this has become the most popular variety in cultivation, primarily because of its immunity to the dreaded rust disease. The shoots are of giant size, very vigorous, straight and of superb quality. Color dark green tinged with purple.
Price: pkt. 10c; oz. 20c; ¼ 1b. 60c; lb. \$1.50.

### ROOTS

One to two years' time is saved by planting roots, which we can supply from November 1st to May 15th. One hundred roots will plant a plot 6 ft. x 50 ft. which is enough for an ordinary family.

### BUSH LIMA BEANS

CULTURE. — These dwarf or bush forms of pole Limas come into bearing much earlier and do not require poles or other support to climb on; and they continue in bearing for weeks. Being more tender than Dwarf Snap Beans, the seed cannot be planted as early. Plant about the middle to latter part of May around New York. The rows should be two and one-half feet apart, the seed sown edgewise in the drills six inches apart and covered inch. They commence bearing in from twelve to fifteen weeks, according to the earliness he variety. Do not brush against bean foliage when wet. 1 lb. to 100 ft. of drill. of the variety.

### 69 EARLY GIANT (Henderson's)

### True Bush, Enormous Pods and Beans

(See Color Plate, Page 58.)

This variety is the best possible Bush Lima Bean, possessing every quality so long known and esteemed in the older pole varieties, and can be grown as easily as any Snap Bean. It is the earliest of the large bush sorts.

The strong, rugged plants of true bush form, 11/2 feet in height, are of healthy, sturdy, upright growth, requiring neither poles nor stakes—and bear from July until frost almost unbelievable quantities of 5- to 6-inch pods, each containing usually four large, thick beans, averaging as large as those of the large pole Limas, and whether used green or cured, they are of superb quality—tender, rich and buttery, the true Lima flavor.

In the green state their tender freshness is maintained beyond the ordinary, accounted for by the pods being unusually fleshy and thick and the foliage luxuriant and sheltering.

### 72 FORDHOOK

A Favorite with the Home and Market Grower

One of the best known and most widely grown Limas in cultivation. It is an improved form of the popular Kumerle or Bush Potato Lima. It is an extremely heavy cropper, just a few days later than our Early Giant. The bush, which grows stiffly erect about 16 to 20 inches high, holds the broad, plump pods well above the ground so that they do not become beaten or discolored by wind or rain. The pods usually contain from 3 to 5 large plump beans of excellent quality. This variety is equally as valuable for the home gardener as for the market grower.

Price, pkt., 15c; ½ lb., 30c; lb., 55c; 2 lbs., \$1.00; 8 lbs., \$3.50; 15 lbs., \$6.00. (See illustration.)

### 78 "IMPROVED HENDERSON"

### Yields Continuously from Early Summer to Frost-Suitable for all Sections, North and South

The original Bush Lima Bean, the "Henderson," was defective in size, and though because of its extreme earliness, thousands of our customers were enabled to grow Lima Beans where none had grown before, the defect remained until the introduction of the "Improved Henderson," which is at least 50 per cent. larger than the original. Though a day or two later, it is still ten days earlier than other bush forms, and weeks earlier than any of the pole varieties, yet retaining all the remarkable anglishes of its predeserable.

markable qualities of its predecessor.

It grows as freely and is just as dependable in the North as in the South; in fact, it is suitable for all sections. The quality is excellent, possessing the rich, buttery flavor common to all Limas. (See illustration.)

The pods are small, about the same length as Henderson Bush Lima, but beans are larger and much thicker; best described as a Baby Fordhook. The pods are well filled, each containing from 3 to 5 very plump beans, which are so tightly packed in the pod that the ends are flattened. When cooked the beans retain a green tint and have a remarkably are flattened.

### 85 LEVIATHAN (Henderson's) The Earliest Pole Lima Bean Grown

Many growers prefer the pole varieties of Limas. These are later than the bush sorts, and in some localities there is difficulty in maturing the crop. In Northern States, or where by reason of continued cool nights the growth is less rapid, Leviathan will be found admirably adapted.

The plant is strong and takes to the poles more readily than any other sort. It is fully a week earlier than any other pole variety, therefore can be grown successfully where other sorts would be caught by frosts of early autumn. It is a prodigious cropper, producing its pods in large clusters, well filled with large, fleshy Beans, pale green in color, of a rich, buttery flavor. (See illustration.) Price, pkt., 15c; ½ lb., 25c; lb., 45c; 2 lbs., 85c; 8 lbs., \$2.75; 15 lbs., \$4.50.

### 90 IDEAL (Henderson's) Of Gigantic Size. Tenderness and Flavor Superb

The vine does not differ materially from that of the ordinary pole varieties. Its chief distinction lies in the size of the pods, which hang in wonderful profusion on the vines. The average yield is greater than in any other variety.

Though a little later than our early Leviathan, it is just as early as the ordinary pole varieties and continues to produce enormous crops up to frost.

Price, pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 85c; 8 lbs., \$2.75; 15 lbs., \$4.50.

# SWEET CORN, Early Varieties

CULTURE—Sweet or Sugar Corn may be either planted one inch deep in rows three or four feet apart, and the seeds placed about eight inches apart in the rows, or planted in hills at distances of three or four feet each way, according to the size of the variety grown. The taller the variety, or the richer the soil, the greater should be the distance apart. We make our first plantings in this vicinity about the middle of May and plant every two or three weeks until the last week in July. In more southerly latitudes planting is begun earlier and continued later. The earliest varieties are ready for the table in eight or nine weeks from planting and the late varieties in from eleven to twelve weeks. I lb. for 150 hills, 12 to 15 lbs. per acre.

# 108 EARLY BANCROSS (New)

(See Color Plate, Page 67.)

# Small Ear of Remarkable Quality and Flavor

Golden Bantam is a dwarf, medium early variety of exceptionally good quality and reliability. It has become one of the most popular varieties in our list. It is well adapted to small gardens on account of its small size; to the more pretentious garden on account of its excessive cropping ability on a given area.

It may be planted to advantage in hills 3 feet apart each way. If in rows,

they should be 3 feet apart and the plants singly at 12 inches apart.

Price, pkt., 15c; ½ lb., 25c; lb., 45c; 2 lbs., 85c; 6 lbs., \$2.40; 12 lbs., \$4.25.

# 125 GOLDEN CROSS BANTAM

(See Color Plate, Page 67.)

# Practically Immune from all Bacterial Diseases

It is with great satisfaction that we offer this variety because it is not susceptible to the prevalent bacterial diseases that have devastated large and small plantings during the past few years.

The ears of Golden Cross Bantam are larger than its prototype Golden Bantam. It matures about four days later than Golden Bantam, but it is quite equal to it in quality. Price, pkt., 20c; ½ lb., 40c; lb., 75c; 2 lbs., \$1.40; 6 lbs , \$4.00.

# 122 GOLDEN SUNSHINE

The value of this variety lies in the fact that it matures several days in advance of the well-known Golden Bantam.

The ears are very compact, about the same size as Golden Bantam, but more refined in appearance, having from 10 to 12 rows

of grains. It is a very rapid grower.

Price, pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 85c; 6 lbs., \$2.40; 12 lbs., \$4.25.

This extra early yellow hybrid is strongly resistant to bacterial diseases. When planted at the same time as Golden Cross Bantam, Marcross will be ready for use about ten days earlier. The ears are practically as long as the ears of Golden Cross Bantam and have 10 to 14 rows of kernels. The quality is superb.

Price, pkt., 20c; ½ lb., 40c; lb., 75c; 2 lbs., \$1.40; 6 lbs., \$4.00.

The plants are very uniform, about 5½ feet high. Many stalks produce two full-sized ears of 8 to 10 rows of kernels that are about 8 to 9 inches long. It matures in 88 days.

# 132 SUGARSWEET (Henderson's)

# Superlatively Sweet-A Delicious Morsel

This is one of the earliest varieties. The dainty snow-white ears grow to a length of 5 or 6 inches, and each ear has an ample stem or handle, which should be left on when cut, so that when served at the table the ear will be more convenient to hold.

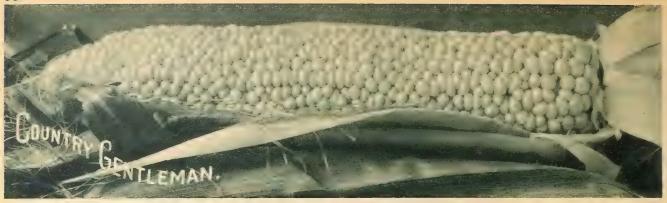

The dwarf size of the stalks, which never attain a height of more

than 4 feet, enables the suburbanite to raise more corn on the same space of ground. It is one of the very few varieties that will thrive well in city backvards. (See illustration.)

# 518 MIGNONETTE (Henderson's) An Ideal First-Early, All Heart

However, for the home gardener who demands quality above all else Henderson's Mignonette is the ideal sort for him to grow. It is a deliciously sweet-flavored, tender morsel, with that creamy-white melt-in-yourmouth appearance.

It is extremely hardy, and is the best sort for early spring use, for cold frame culture or for an outdoor winter crop in the Southern States. It is very early and heads quickly and surely, being slow to go to seed. (See illustration.)

It is a very large, robust-growing variety, rooting deeply, resisting hot, dry weather, very slow to run to seed and a sure header under most trying conditions. The outer color is of a distinct apple green.

We introduced this variety a number of years ago, and it has been extensively grown by our customers in almost all sections of the country and from whom we receive most gratifying reports. As a standard main summer crop, hot weather Lettuce, it is in every way desirable and has no equal, but it is not recommended for forcing. (See illustration.)

# LEAF VARIETIES

# 508 GRAND RAPIDS (Henderson's)

# Indoors or Out, the Easiest of All to Grow

This is probably the best of the loose-leaved varieties. It forms no head but produces an abundant crop of pale green leaves, slightly but closely crumpled, which, even when old, retain their characteristic sweetness and brittle character.

We strongly urge those who cannot succeed in getting Lettuce to

head to grow Grand Rapids. The plant may be cut whole, or the outside leaves may be removed, leaving the younger ones to grow. It is largely grown for forcing. (See illustration.)

# ROMAINE or COS VARIETIES

# 503 CRISPYCOS (Henderson's)

# ONION

Henderson's Two Popular Sweet Spanish Varieties

# 612 ESPANOLA

The Handsomest and Mildest Large Onion in the World

Spanish Onions may be grown in any locality where onions will grow, but ideal conditions for their best development are found in locations having a warm, long season, deep, rich, well-tilled soil, and an available water supply in case of drought. Under such conditions great crops of ideal Spanish Onions are produced; bulbs that will measure 4 to 6¼ inches in diameter, and weigh up to 2¼ lbs. each, equal in every respect to the imported onions.

When transplanting the seedlings see that they are placed 6 inches apart to give the long roots ample feeding ground and encourage rapidity of

growth.

An experienced onion grower gives this brief description of **Espanola:** "Bulbs extremely large, almost globular in shape; neck and root disc, amost globilar in shape; neck and root disc-small and fine; skin light yellow; interior fine-grained, and flavor mild; foliage distinctive, a deep green with glossy surface rendering Espanola practically immune from fungoid diseases." (See illustration.)

Price, pkt., 15c; oz., 50c; 1/4 lb., \$1.25; lb., \$3.50.

# 610 BARCELONA

A Spanish, Keeping Onion, Sparkling White, Mild Flavor

We have named this novelty Barcelona because it is a selection obtained from our famous onion, Espanola, although it is pure silvery-white in color, instead of pale golden-yellow, like its parent. It is also more of a true globe shape. The outer skin is silver-white and the inside is sparkling white, of fine texture, mild flavor and delicate tenderness.

In sections where there is a long, warm season and on soil that is well tilled and rich, Barcelona will attain almost as large a

size as its parent Espanola.

The Espanola and Barcelona onions are very popular; are in all respects equal to the imported. They also keep fairly well for winter use but not quite equal in keeping qualities to the Southport Globes or Danvers.

Price, pkt., 15c; oz., 50c; 1/4 lb., \$1.50; l lb., \$4.00.

# 613 PRIZETAKER

Magnificent in Size—Delightfully Mild in Flavor—A Match-less Keeper—Succeeds in All Sections of the U. S.

Prizetaker is at once the largest and most handsome of all Amer-

ican Onions, and is renowned everywhere.

It is so well-bred that the tops dry down entirely when it ripens, leaving a clean, sound bulb, perfect in form, rich in color and wonderfully solid. The outer skin is rather pale yellow, the flesh pure white throughout. It is extremely mild in flavor, very much esteemed for slicing, baking and boiling; in fact, in whatever way it is prepared it is unsurpassed. (See illustration.)

Price, pkt., 10c; oz., 35c; 1/4 lb., \$1.00; lb., \$2.50,

# 623 LARGE RED WETHERSFIELD

This is a general favorite everywhere, and is largely grown both for narket and private use. It shapes up very quickly, insuring a good supply during the growing season, while its keeping quality is equal to the best. The exterior color is dark, glossy red, and the flesh is faintly tinged with the same color.

Price, pkt., 10c; oz., 35c; 1/4 lb., \$1.00; lb., \$2.75.

# 627 WHITE PORTUGAL or Silver Skin

This is beyond doubt the very best Onion for general use during the spring, summer and autumn. We do not esteem it so highly for winter use, as it is excelled by other sorts for keeping purposes.

There are none that yield more delicious "scallions," or young

plants for salad purposes, none which are more suited to boiling during the growing season, and none so generally esteemed for their mild, delightful flavor. Should there be any small bulbs left in the row at the end of the season, they may be used for pickles.

Price, pkt., 10c; oz., 35c; 1/4 lb., \$1.00; lb., \$3.00.

# 625 WHITE BUNCH

Of vigorous growth and of fine, mild quality; especially adapted for using when young.

Price, pkt., 10c; oz., 40c; 1/4 lb., \$1.20; lb., \$3.50.

# 629 YELLOW GLOBE DANVERS

There is a considerable variation in the shape of this varietyshapes that vary from flat to deep oval. We have consistently adhered to the original type, which, but for a slight depression from top to bottom, is a perfect sphere. The matter of tops has had close attention, and are so bred that at maturity they disappear entirely, leaving the bulbs quite without neck, clean, solid and good throughout.

Price, pkt., 10c; oz., 35c; 1/4 lb., \$1.00; lb., \$2.75.

# ONION

CULTURE—One oz. for 100 ft. of drill; five to six lbs. in drills for an acre. For an early crop, seed may be sown in cold-frames in February or March, transplanting when large enough to handle in April or May. Regular open-ground sowing should be made about the latter part of April or early May in latitude of New York, in soil that has been manured the previous year. Sow about one-half inch deep in rows one foot apart, and then thin out to three inches apart in the rows.

Clean cultivation and a regular weekly or bi-weekly spraying with Hendersons' Rolenone or Nicoline Sprays (see pages 136 and 137) will control Thrip or white blast, which is quite prevalent some seasons, and thus insure healthy, perfectly formed bulbs.

# 605 ADRIATIC-BARLETTA

Extremely early; small, pure white silver skin; flesh mild, but firm; unexcelled for pickling.

Price, pkt., 10c; oz., 40c; ½ lb., \$1.00; lb., \$3.00.

# 614 EBENEZER

A dependable Onion for the home or market grower; medium large in size, yellow in color and flat-tened in shape. In season Early Delicious is ready practically as soon as First-of-All, and has the added advantage of being more productive, larger podded, and above all, of much higher quality. # SALSIFY or Oyster Plant

# 780 MAMMOTH SANDWICH ISLAND

Salsify is one of the best of our root vegetables, and is rapidly increasing in popularity. Cooked in any form, Salsify is wholesome, appetizing and nutritious. Its peculiar oyster-like flavor is most apparent when sliced and fried; it may also be served and eaten as Asparagus. It is one of the best remedies for various forms of indigestion. Most of its medicinal value is contained in the milk, which exudes from the skin. (See illustration.) Price, pkt., 10c; oz., 35c; 1/4 lb., \$1.00; lb., \$2.75.

# SPINACH

CULTURE.—Sow thinly in rows 12 to 15 inches apart, covering the seed about one-half inch; thin the plants to four inches apart in the row. The main crop is sown in August and September. It is sometimes covered up in cold localities with straw or salt meadow hay during the winter, but in shellered fields there is no necessity for covering. For summer use it may be sown at intervals of two or three weeks, from April to June. Spinach develops best and is most tender and succulent when grown in rich soil and in cool weather; during the summer it often bolts to seed. 1 oz. for 100 feet.

# 802 LONG SEASON (Henderson's)

# The Best for Sowing in Spring and Summer for a Successional Supply

The development of a type showing a marked long-standing character has given us Henderson's Long Season Spinach, removing the only obstacle to its general cultivation, so that there is now nothing to hinder the least experienced from enjoying this wholesome vegetable throughout the entire season. The plants are very hardy. Seed sown in September will produce small plants, which, with a slight covering of loose, dry material, will be available for use very early in the

235 GREEN PLUME (Henderson's) The Spinach-Leaved and Asparagus-Ribbed Variety

The leaf is almost identical with that of the Spinach plant, and is as dark a green in color. It is a much darker green than any other variety of Swiss Chard, and it is also much more tender. The midribs too, are edible and tender, and very white and attractive looking.

Its greatest value lies in the fact that it produces "greens" all summer long, and is therefore available when Spinach is unobtainable. It can be easily grown in any ordinary garden soil. When picking for use cut the leaves from the outside when still young, or pull them off in an outward and downward direction. downward direction. Leaves may be picked from it continuously from June until frost. (See illustration.

234 LUCULLUS Crumpled-Leaved

This is quite distinct from the old and wellknown variety. The leaf stems are rounder, very thick and fleshy. The whole plant is taller and the leaves, instead of being smooth, are deeply and closely crumpled, similar to a Savoy Cabbage. It is very tasty and palatable, and preferred by many in place of Spinger. in place of Spinach.

This variety is much sought after by those who prefer the rib of the leaf, as it is more strongly developed than in the old variety.

CULTURE.—Sow when the weather has become settled and warm. Plant in hills. For bush varieties the hills should be 4 feet apart each way, and for running sorts, 8 feet. Eight seeds should be sown in each hill 1 inch deep, thinning out after they have attained their third and fourth leaves, leaving two or three of the strongest plants. One ounce for 30 hills; 3 or 4 lbs. in hills for an acre.

# Henderson's World Famous Tomatoes 903 RICHMEAT 915 WINSALL

Shown in colors on opposite page

Unparalleled in the history of tomato breeding—Richmeat now stands supreme as the World's Quality Tomato, as well as the largest and meatiest. Among the remarkable characteristics of this variety, are the vigorousness of its growth and its drought-resisting qualities,

The fruits are rich scarlet in color, very large and meaty; fruits weighing up to three pounds are not unusual. They are round-oval slightly flattened in shape, and it is a very shy seeder as no distinct seed cells are produced, but on the contrary it develops a solid mass of rich, firm

pulp. Its flavor is deliciously sweet and free from acidity.
When setting out plants of Richmeat, it is recommended to space them farther apart than ordinary varieties, on account of its vigorous habit; also the yield and size of the fruits will be increased if some of the

superfluous foliage is pruned away.

Richmeat is a main crop variety, and its bearing season covers a long period. We heartily recommend it to home gardeners and roadside stand producers, who cater to a quality trade.

Price, pkt., 25c; 5 pkts., \$1.00.

# 876 BEEFHEART Shown in colors on opposite page A Home Garden Tomato of Superior Excellence

Customers who grew it say that they have never grown a tomato that was more beautiful, more meaty, or better flavored. It is not uncommon to see the vines carrying fruits weighing two pounds each.

The color is brilliant scarlet and the skin is so smooth as to give the fruits a polished appearance. The solidity and weight of this variety is derived not from a thick-fleshed outer wall and tough skin, but, like our famous Ponderosa, the seed cavities have given way to a solid mass of meaty, succulent flesh, so that the fruit is practically seedless. The plant is vigorous and bears large crops of beautiful fruit

**HENDERSON'S** PRIZE TOMATO

WINSALL WINS **EVERYWHERE** 

(Shown in colors on page 85)

The outstanding merits of Henderson's Winsall Tomato are its remarkably vigorous and disease-resistant growth, its uniformly round

form, its large size, and the delicious flavor of its firm flesh.

Henderson's Winsall is about five days later than Ponderosa in maturing its first fruits, but its second fruits seem to ripen more rapidly than do the fruits of Ponderosa. The coloring is indeed perfection, the bright pinkish red extending close up to the stem ends.

Henderson's Winsall is very meaty, the entire fruit being edible, tender and delicious, and remarkable for an almost entire absence of seeds.

It is far more uniform in both size and conformation than the popular Ponderosa, and eclipses it in productivity.

Picked just before the stem-end is entirely red, and spread on a low table, stem-end down, in a cool basement, it ripens in a day or two to as near perfection as could possibly be.

Winsall Tomato is very vigorous in growth. Therefore it is necessary to prune away some of the superfluous foliage to admit light and air to the flowers and assist pollenization. A dense mass of leaves and vines overshadowing the blossoms will cause them to fall, and fail to produce fruit.

Price, pkt., 25c; 5 pkts. for \$1.00; ½ oz., \$2.00; oz., \$3.50.

# 889 GOLDEN PONDEROSA (Special Strain)

(Shown in colors on page 85)

A yellow Tomato that has color alone to distinguish it is not entirely novel. Many such varieties have been introduced, but, having failed to gain popularity owing either to lack of flavor or some other essential, have disappeared from cultivation. GOLDEN PONDEROSA is equal in every respect to its parent the red Ponderosa, possessing all the qualities that have made our Ponderosa a household word throughout the land, and, in addition, has the striking color which compels instant attention. It originated as a "Sport" from red Ponderosa and comes remarkably true; but some parti-colored fruits may be expected.

For salad purposes it presents an attractive and inviting appearance.

Price, pkt., 25c; 5 pkts., \$1.00; ½ oz., \$1.50; oz., \$2.50.

# 896 THE ORANGE

(Shown in colors on page 85)

A Real Deep-Orange Colored Tomato of Appetizing Appearance The vines are vigorous and free from disease; and the fruits are very large, almost equaling in size our famous Ponderosa. The outside color is a beautiful orange blush, and the inside color, a deep golden orange. There are very few seeds. The flavor is very good, mild and delicious; quite different from the yellow varieties which usually contain considerable acid.

Makes a most attractive dish when sliced and served with the red varieties. All our customers should try the Orange Tomato this year.

Price, pkt., 25c; 5 pkts., \$1.00; ½ oz., \$2.00; oz., \$3.50.

# 900 PONDEROSA Henderson's Special Strain Sometimes called Beef Steak

For Years the Best and Most Popular in the American Garden -produces fruits Magnificent in Size-Delicious in Flavor.

There are two kinds of solid tomatoes. One derives its solidity from a thick-fleshed outer wall and a tough skin, and this is eagerly sought by the shipper. The solidity of Ponderosa is different. A serious defect in many sorts is the hard, core-like character of the cell walls, which frequently remain green and hard long after the other parts of the fruit are ripe.

We have succeeded so thoroughly in modifying, developing, and enlarging these cell walls in Henderson's Ponderosa that they have almost filled the seed cavities with tender flesh which in less carefully

bred strains contain only seed and watery pulp.

The original, highly bred and selected type of Ponderosa can only be secured direct from us, as we do not supply dealers. Spurious and uncared-for stocks will be disappointing. (See illustration.)

Price, pkt., 15c; 2 pkts., 25c; oz., 90c; 1/4 lb., \$3.00.

# 912 YELLOW BEEFHEART (NEW) Beautiful in Form and Color. Excellent for Salads.

This new yellow variety of our Beefheart type, will appeal to Tomato growers desiring a yellow colored variety. The plant is very vigorous and produces an enormous crop. The fruits are the same shape as Beefheart, but the skin and flesh are a rich deep yellow. The solidity of the flesh is caused by the lack of distinct seed cells, and in this report in identical with the Pad Beefheart. spect is identical with the Red Beefheart. The quality and exceptionally fine, and due to the low acidity, is very sweet. The quality and flavor are

Price, pkt., 25c; 5 pkts., \$1.00.

CULTURE.—The seed should be sown about ½ inch deep during March or early April in a hotbed, greenhouse, or window of a room, where a night temperature of not less than 60 degrees is kept. When the plants are about two inches high, they should be set out three inches apart in boxes three inches deep, or potted into three-inch pots, allowing a single plant to a pot. They are sometimes shifted a second time into larger pots, by which process the plants are rendered more sturdy and branching. About the middle of May in this latitude, the plants may be set in the open ground. Our pamphlet "Tomatoes, How to Grow Them," tells how to grow them to perfection. Sent free on request with orders.

# 885 EARLIANA

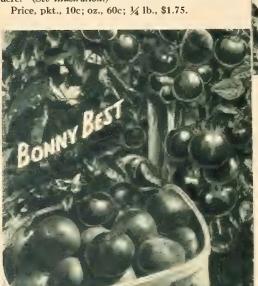

This is still the best extra early Tomato for the family garden, as it bears a very heavy crop quite early in the season. It has excellent flavor and is remarkably solid. (See illustration.)

# 877 BONNY BEST

# Large Size Tomatoes Bright Scarlet in Color

Bonny Best is decidedly the "best" in its class. It is almost as early as Earliana; and is a larger tomato, and a heavier cropper. The fruits are deep scarlet in color, very smooth, perfectly round, solid and meaty. Bonny Best is also an excellent variety for the canner, as it yields from 12 to 15 tons to the acre. (See illustration.)

# 878 BREAK-O'DAY A Solid Extra Early Va-riety—Disease Resistant It is a cross between

Marglobe and another variety, not as yet introduced to commerce. It is greatly disease-resistant and is the same shape, color and size as Marglobe but much more solid; and to crown all is 10 to 12 days earlier in ripening. This means in ripening. This means that Break-O'Day will ripen along with Bonny Best and the other extra early tomatoes, but excels them in size, solidity and seed-

# 901 RUTGERS

### For the Home Garden, Market and Canning

This new variety developed by the New Jersey Agricultural Experiment Station produces a sturdy plant with thick stem and an abundance of foliage to protect the fruits from sunscald. The fruits are large and similar in shape to Marglobe but ripen earlier and are of a bright scarlet color. The flesh is firm and red throughout which makes it an ideal canning and juice tomato. (See illustration.)

# 905 THE PRITCHARD or SCARLET TOPPER

For its disease resistant qualities, it supersedes all others. The vines are very sturdy in growth—shorter than the Marglobe—and they produce the heaviest crops of any of its class

Unlike other early varieties, Scarlet Topper continues to bear long after the other sorts have ceased. The fruits are large, from 3 to  $3\frac{1}{2}$  inches in diameter, and perfectly globe shaped.

# Two Valuable Turnips

# 919 EARLIEST FLAT JAPAN

The earliest turnip in cultivation, maturing in about 37 days. This delightful gem is destined to create a new interest in this excellent vegetable. The beautiful smooth glistening appearance of the small flattish snow white turnip and the mild delicate flavor will make it a welcome addition to the daily diet.

It is particularly recommended for an early spring crop, for it is at this season most turnips are inclined to have a slightly bitter flavor which is entirely missing in this sort. The foliage of most turnips grows close to the ground and becomes an ideal breeding place for aphis; not so this variety, it grows directly upright, conse quently it does not protect aphis and also permits thorough spraying. (See illustration.)

The Long Island Ruta Bagas have established a nation-wide reputation for The Long Island Ruta Bagas have established a nation-wide reputation for their high quality; so, when an improvement appears in this type, it can be accepted at once as an outstanding and extraordinary sort. For many years, it has been the object of growers of this valuable vegetable to obtain a type that would be finer in texture and flavor. In other words, to grow a Ruta Baga, that would create a greater appeal for table use. We believe that the Riverhead strain will supply that appeal. It is very refined in appearance, smooth and clean, medium in size, globular in shape with small top growth and no indication of a neck. Its flavor is sweet and delicious; as desirable for the home garden as it will be for the market grower. Price, pkt., 10c; oz., 25c; ½ lb., 75c; lb., \$1.75.

VEGETABLES IN VARIETY FROM THE HOME GARDEN

# Fill Your Salad Bowl from the Home Garden

The recent popularity of the Salad Bowl is not entirely due to the fact that its vitaminladen, blood purifying ingredients make it one of the most healthful of all foods, but also because it possesses a piquancy, a zest giving, teasing, tantalizing, appetite provoking stimulus, that merits for it a place of honor at every meal.

Besides the popular items contained in the Spring and All Season Salad Bowl Collections listed on the back cover, there is a wide and varied range of salad plants, all of which are easily grown in the garden where they occupy a minimum amount of space. The following list is far from complete, but it contains the principal ones for cultivation

# A Suggested Plan That Will Keep the Garden Busy Producing Delicious Vegetables from Early Summer to Late Fall

The "Garden Plan" suggested below, for a garden about 60 x 100 feet or larger, has been arranged with a view to keep every foot of ground busy and productive spring, summer and autumn, thereby doubling the usual output and extending the fresh vegetable season to maximum limits. The following features may be noted: suitable succession crops to follow first crops in the same row; leaf or above ground crops to succeed root or below ground crops and vice versa; "brassicas" (Cabbage and Turnip families) not on the same ground in succession; "legumes" (Peas and Beans) (nitrogen gatherers) interspersed throughout the garden to benefit the soil; tall growing crops on north or west side of garden so as not to shade dwarfer growing vegetables; winter roots remaining in ground are in outside row; rows running lengthwise of the garden for ease and rapidity of cultivation with a wheel hoe, described on page 126.

# HAY AND PERMANENT PASTURE

Special Grass Seed Mixture

Produces Wonderful Hay Crops and Pasture, Maintaining Its Cropping Qualities Twenty Years or More

It has been fully demonstrated by the careful trials considered by the Agricultural Experiment Stations in various parts of the country that good pasturage, and good hay crops can be best secured by sowing Grass seeds in mixtures. Pastures seeded naturally are always found to contain many varieties of Grasses growing and flourishing side by side without detriment to each other, and attaining their maximum of growth at different periods of the year. It is to this notable characteristic that such pastures furnish continually an abundant bite, when meadows and pastures composed of but a few varieties are brown and bare.

This mixture is made up of native and acclimated foreign Grasses thoroughly blended, and improved upon during trials under widely varied conditions, soils and localities for several years until practically perfect, our aim being to produce, under the extremes of the American climate, a permanent dense and deep-rooting turf that would yield year after year the maximum quantity of foliage. These Grasses are of superior quality, inviting, sweet and nourishing, whether used as hay or pasture.

In preparing these Mixtures, the greatest care is exercised in selecting such varieties as are suited to the soil to be sown and are likely to realize the object in view. Therefore, a description of the soil, whether Light, Medium or Heavy, and climate, and if with or without a grain crop, should accompany each order. Sow 40 lbs. per acre.

Price, lb., 50c; 10 lbs., \$4.00; 25 lbs., \$8.75; 100 lbs., \$30.00; transportation paid.

# PERMANENT PASTURE

# Special Grass Seed Mixture

There is no more important part of a farm than a good pasture, and that can only be obtained by the use of the proper Grasses, varieties that have different root formations and different habits and season of growth, in order to maintain a rich, close turf throughout the entire season. Timothy alone should never be used for pasture because it will not stand trampling, and soon runs out when heavily pastured and at best is short-lived, as compared with the permanent Grasses used in our Special Mixtures. These Mixtures contain over a dozen of the best permanent Grasses, both American-grown and imported. All are permanent, and when once established will last indefinitely, if the fertility of the soil is kept up by occasional top-dressing. Sow 40 lbs. per acre. See illustration.

Price, lb., 50c; 10 lbs., \$4.00; 25 lbs., \$8.75; 100 lbs., \$30.00; transportation paid.

# PERMANENT HAY

# Special Grass Seed Mixture

Although the most widely cultivated Hay Grass in the United States is Timothy, or a mixture of Timothy and Clover, and while they answer the purposes admirably on farms where the soil is suitable and where the usual three and four years' rotation is carried on, yet there are many Grasses which will yield more profitable returns.

An acre of Henderson's Special Grass Mixture for Permanent Hay will yield double the quantity of an acre of Timothy and Clover, and the farmer whose land is sown with a proper mixture of Permanent Grasses, requiring only an occasional top-dressing of manure or fertilizer to maintain heavy cropping qualities for twenty years or more, avoids the expense of the yearly plowing, and cultivating necessary in rotation cropping. Sow 40 lbs. per acre.

Price, 50c per lb.; 10 lbs., \$4.00; 25 lbs., \$8.75; 100 lbs., \$30.00; transportation paid.

# WOODLAND PASTURES Special Grass Seed Mixture

It will make a closer and more even pasture than Orchard Grass alone. Sow 40 lbs. per acre.

Price, lb., 60c; 10 lbs., \$5.00; 25 lbs., \$11.25; 100 lbs., \$40.00; transportation paid.

Henderson's Individual Recleaned Grasses are therefore Unequaled for Purity and Germination.

Better turf is obtained in most cases if a mixture of grass seed is sown. We will be glad to make special mixtures when desired, in accordance with the purchaser's requirements or after his own formulas. Transportation Charges Paid.

# STRAWBERRIES HENDERSON'S SELECTIONS

#### NEW VARIETIES

#### STANDARD VARIETIES

The Strawberries following were transplanted into cold frames in the fall, and if planted out any time before May 5th, will, under proper conditions, fruit some in the present year.

All the varieties offered are perfect flowering (bisexual) except where marked P or pistillate. The latter must

have a row of a perfect flowering sort every nine or twelve feet to pollenize their blossoms.

#### CATSKILL

(Mid-season, Perfect Flowering)
Recently developed at the New York Experiment
Station, Geneva, N. Y. The plant is extremely
vigorous and produces quantities of runners. The
fruit is very large, somewhat elongated and it must
be classified as a strictly fancy berry, because of its
bright color and dark green caps, which gives it a
most attractive appearance. The fruit is delicious most attractive appearance. The fruit is delicious in flavor and it possesses a melting tenderness due to its being somewhat softer than most varieties. This makes it most desirable for the home garden and for roadside stand trade.

#### DORSETT

(Early to Mid-season, Perfect Flowering)
The plants are vigorous, with deep rich green foliage, runners are produced in abundance. The flowery stalks are strong, and the fruit is held well above the ground. The beautifully molded, conically shaped, bright red berries are large and uniform in appear-

The outstanding merit of this berry, however, is not its size, or appearance, but its delicious flavor.

#### **FAIRFAX**

(Early to Mid-season, Perfect Flowering)

This variety has often been referred to as the berry for a king."

The plants are very hardy and disease resistant. The flower stalks are strong, and produce quantities of perfect heavily pollened flowers that are larger than most strawberry blossoms. The berries are very large, somewhat blunt in shape, and bright red with prominent yellow seed. When over-ripe, the fruit turns dark red but still retains its firmness and delicious flavor. (See illustration.)

Price of the New Straw-berries, 60c per doz.; \$3.50 per 100; \$20.00 per 1,000.

#### CHESAPEAKE

(Mid-season to Late, Pistillate.) A splendid grower (Ma-season to Late, Fishman.) A splending grower making just enough runners for a matted row. The plants root deeply, are vigorous and healthy, with large foliage. One of the best in flavor, shape, size, color and appearance.

#### EARLY JERSEY GIANT

(Early, Perfect Flowering.) There is no known variety that ripens earlier and none bearing large berries that come near it in earliness. The berries are brilliant crimson scarlet in color, very firm, conical in shape, with pointed tip and it colors all over at once. They have a rich aroma, and delightfully mild wild strawberry flavor.

Price of the Standard Strawberries, 50c per doz.; \$3.00 per 100; \$18.00 per 1,000.

#### FALL-FRUITING VARIETIES

The varieties described below will produce fruit The varieties described below will produce fruit at the same season as the ordinary strawberries, and keep on bearing until frost; yet to get the best results the blossoms should be kept cut off until August 1st, so as to conserve the energies of the plants for the fall crop. Treated in that way, ripe fruit will be borne in about three weeks after that date and continuously until frost.

Champion Everbearing. This is one of the newer varieties that promises to be a decidedly more prolific sort than Superb, which it resembles in habit of growth and appearance of fruit.

Lucky Boy. Claimed to be "the biggest, sweetest, and most productive ever-bearing strawberry as yet produced." From its behavior with us and the enthusiastic reports we have received from other growers, we feel it is destined to be the "ever-bearing variety of the future."

Mastodon. Called by some the Wonderberry. A large, heavy yielding ever-bearing variety of delicious flavor yields a large crop in June and continues to bear berries of amazing size and surpassing quality throughout the summer and fall.

Price of Fall Fruiting Varieties, 75c per doz.; \$4.00 per 100.

Note,-The Straw-berry plants offered in this catalog cannot usually be supplied after May 5th. Our summer list of Pot-grown Strawberries is usually ready about June 15th, and is mailed free to cus-tomers, or may be had application upon mail when ready.

The drainage plug in the end is removable, to be taken out only when the box is in the open and during heavy rainfall.

The material used in construction is copper-steel, with a lead coat, which will neither rust nor deteriorate like plain galvanized iron and is the best material procurable for a long-life flower box to be continually under moisture. Insects that suck the juices from plants, foliage, etc., such as lice, green, black and white aphis or fly, mealy bug, red spider and scale, must be destroyed by contact insecticides. Those in powder form kill by the breathing pores in the insect's skin; in liquid form, by being absorbed through their pores. The best contact insecticides in powder form are Rotenone and Tobacco Dust. The best liquids are Henderson's Aphis Spray, Evergreen, Fish Oil Soap, Kerosene Miscible Oil, Red Arrow, etc. For San Jose, Oyster and Scurfy Scale, used Lime Sulphur, Scalecide, etc. Sulphur, Scalecide, etc.

Insects that eat plants, foliage, vegetables, fruits, flowers, etc., whether bugs, beetles, worms, caterpillars or slugs, are more quickly and effectually destroyed with a poisonous stomachic insecticide, such as Arsenate of Lead. Less poisonous stomachic and contact insecticides are Evergreen, Kerosene Miscible Oil, Red Arrow, Rotenone, Slug Shot, etc. For ground insects, cut worms, grubs, etc., use Snarol or Vermine.
